

Automated Surrogate Modeling for Vehicle Safety

Contact us via E-MAIL

Unique advantages of ASMOS

- Create surrogate models for crash simulation with just a few clicks.
- **Customize** the models to fit every load case requirements and crash scenarios.

Customer value and benefit

- Shorter development cycles.
- Go to market even faster.
- Save additional time and money.

E-Mobility

body structures.New electric models also cause an increasing

Shorter development cycles

variety of versions.

New competitors are forcing well-established OEMs to continuously shorten their development cycles.

Time and cost intensive crash simulations

- For great and safe car body design, many crash simulations are required.
- These crash simulation just take too long and are very expensive!

Surrogate modelling as a competitive advantage

- Suitable surrogate models can greatly speed up most of the crash simulations.
- Reduce computational time up to 80%.
- Creating surrogate models with automated software tools 100x faster compared to manual model build up.

Dialogue and discussion to meet expectations

- Point out your requirements, for the best solution.
- We adjust ASMOS according to your needs.

Get early access and test our solution

We offer early access to our software tool ASMOS for companies that want to test and adapt our solution.
