

Evolution of Flight Vehicle System Identification

Peter G. Hamel and Ravindra Jategaonkar
DLR, German Aerospace Research Establishment
38022 Brunswick, Germany

Synopsis:

From the nostalgic remembrance of the first dynamic flight test this **Survey Paper** traces several milestones in the history of flight vehicle system identification. A comprehensive account of modern system identification techniques is provided. Several challenging examples bring out the fact that these techniques have reached a high level of maturity, making them a sophisticated and powerful tool not only for research purposes, but also to support the needs of the aircraft industry. This survey paper includes 183 references and provides a consolidated list of publications on the subject.
